FIRSTHACK 2026 · SUBMISSION

CAMPUS MITHRA

A voice kiosk, app, website and admin dashboard that answer visitors' and students' campus questions in English, Kannada or Hindi, and walk them to the right building.

02 THE PROBLEM

IMPACT & USEFULNESS · 20%

Admission day: families on a campus they have never seen, with questions nobody at the gate can answer in their language.

1 Lost on campus

Admission office, accounts, hostel, departments. Families walk around for twenty minutes looking for the right building.

2 Same questions, every year

Placements? CSE fee? Is there a hostel? A bus to my area? The college has every answer, in documents nobody at the gate can see.

3 Not in their language

Many parents are more at home in Kannada or Hindi. Many students speak Kanglish or Hinglish. An English notice board does not help.

WHO: first-time visitors on admission day — students and their parents — plus current students who need the hostel, a lab or today's notice.

HOW WE KNOW: Chidambara, a parent on admission day: *"We asked three people where the accounts section was and got three different answers. Nothing at the gate was in Kannada."*

03 OUR SOLUTION

INNOVATION & ORIGINALITY · 30%

Campus Mithra lets a visitor ask the gate kiosk out loud, in their own language, and get a checked answer from the college's own records — with a QR code that walks them there on their phone.

WHAT MAKES IT DIFFERENT

- Real hardware at the gate: an ESP32 kiosk with a mic, speaker and a talking Mithra face — no phone or app needed to ask.
- Code-mixed speech: asked in Kanglish or Hinglish, it answers in Kanglish or Hinglish; plain Kannada or Hindi gets plain replies.
- Never makes things up: a grounding check rejects any sentence or number not in the college's records.
- One live source: kiosk, website, Android app and admin dashboard share the same campus data and map.

WHAT IT DOES NOT DO

- Answer anything outside the college — it says "I don't know about that."
- Run alone: the kiosk needs a PC beside it over USB.
- Show Kannada or Hindi script on the kiosk screen — it shows Latin letters and speaks the language.
- iOS: the app is Android only for now.

04 HOW IT WORKS

PRESENTATION & CLARITY · 20%

1 ASK

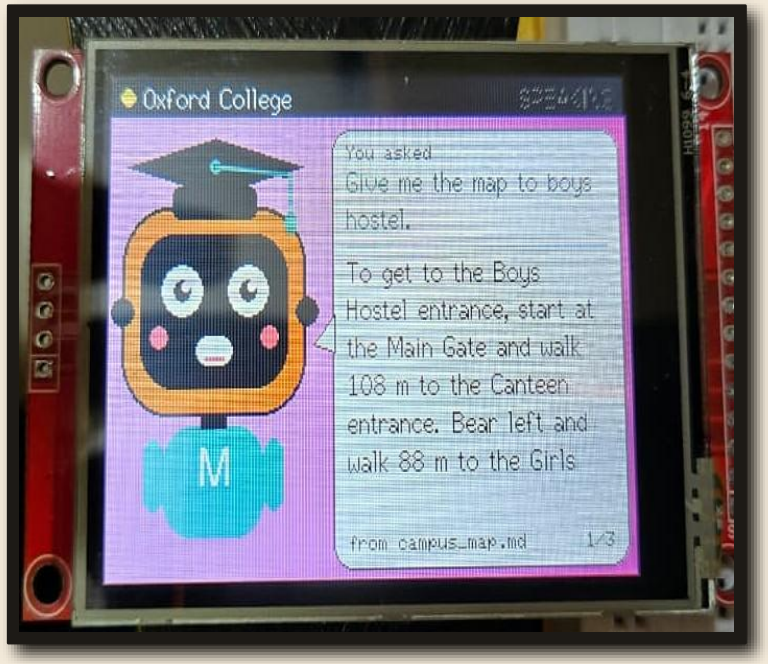

Hold the kiosk button and ask out loud: "Boys hostel-ge hoguva map kodu."

2 GET THE ANSWER

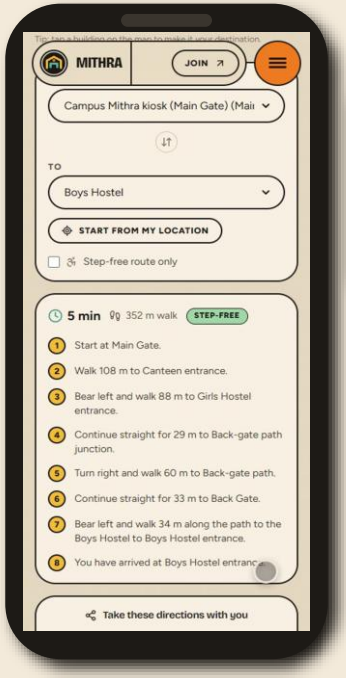

Mithra says and shows the answer in the same language, names the source, and shows a QR code.

3 WALK THERE

Scan it: the route opens on the phone with live GPS along the real campus paths.

5 min
352 m walk

05 WEBSITE AND APP, LIVE

TECHNICAL EXECUTION · 30%

LIVE CAMPUS MAP

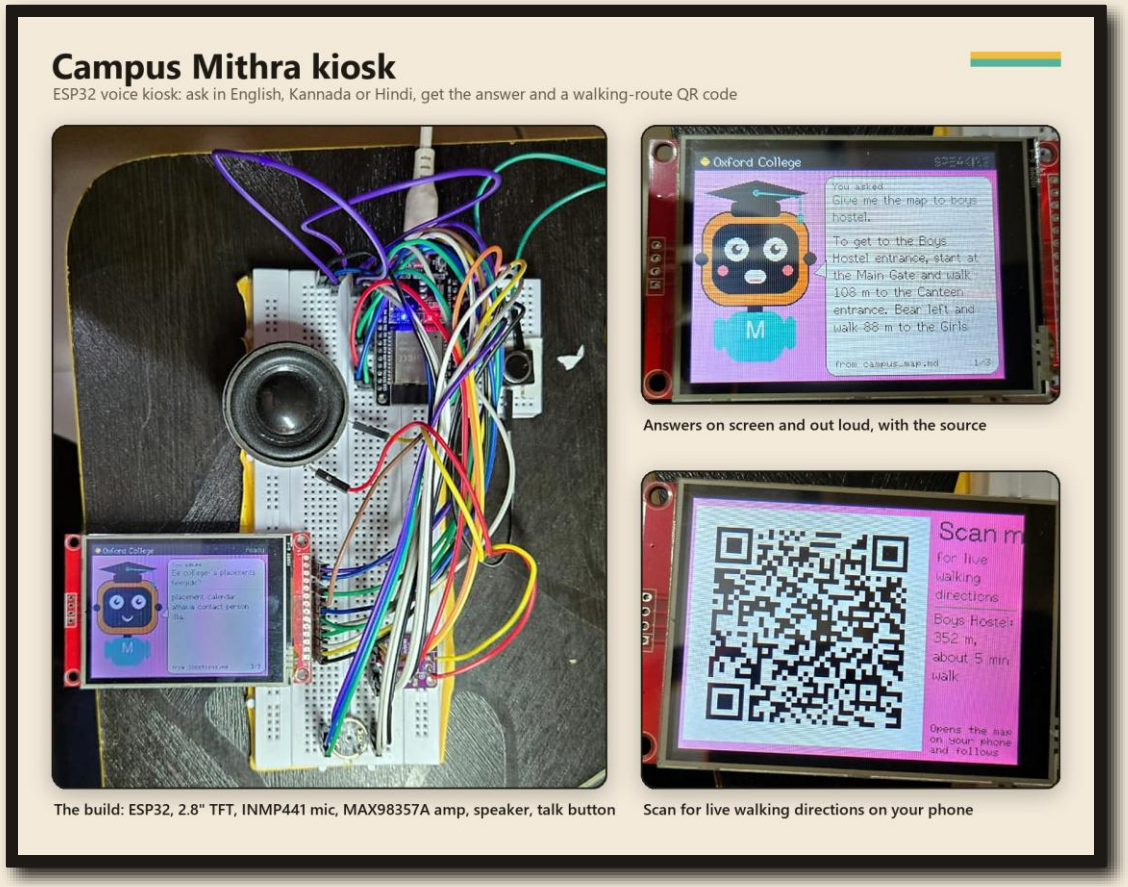

Real campus paths on the satellite view, shortest and step-free routes, and a QR to take them to the phone.

ANDROID APP · NOTICES · EVENTS

06 THE KIOSK HARDWARE

TECHNICAL EXECUTION · 30%

- **ESP32 DevKit** runs the firmware (C++, PlatformIO)
- **2.8" ILI9341 TFT** Mithra's face, answers and QR codes
- **INMP441 I2S mic** records the question at 16 kHz
- **MAX98357A amp + speaker** speaks the answer, lip-synced
- **Push button** push-to-talk on GPIO27

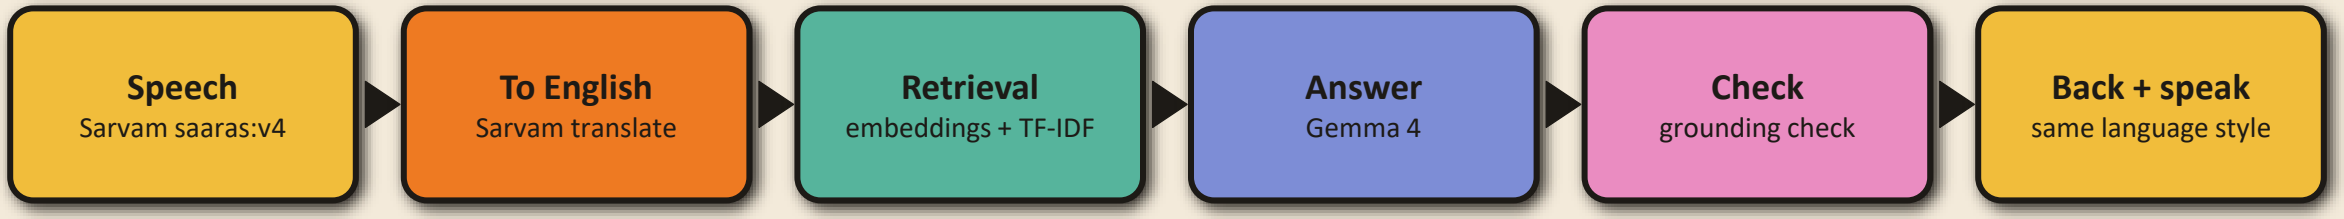

₹2–3k
kiosk electronics

USB 921600
baud to the PC — no Wi-Fi keys on the device

Less than one temporary helpdesk person for an admission season.

07 WHAT WE BUILT IT WITH

TECHNICAL EXECUTION · 30%

LANGUAGES & FRAMEWORKS

- Kiosk: C++ on ESP32 (PlatformIO, TFT_eSPI, QRCode)
- Server: Python, FastAPI, NumPy
- Web + admin: Next.js 16, React, TypeScript, Tailwind, Google Maps
- App: Flutter (Android)
- Backend: Firebase Auth, Firestore, Storage, FCM

WHAT WAS HARDEST

- Answering in the style asked: Kanglish in, Kanglish out — translate to English for search and checking, then back with mayura:v1 for code-mixed or sarvam-translate for pure Kannada/Hindi.
- Streaming speech to the ESP32 over USB serial without stutter: playback paced by credits from the kiosk.

WHAT WE USED FROM OTHERS

- Sarvam AI (speech, translation), Gemma 4 via Google AI Studio, edge-tts voices
- Remotion for the animated characters
- Open-source libraries listed in the repo
- AI coding assistants helped write and review code

08 SEE IT RUNNING

TECHNICAL EXECUTION · 30%

CODE REPOSITORY

Public, with full commit history.

09 WHAT WORKS, WHAT'S NEXT

WORKING TODAY

- Kiosk answers spoken questions in English, Kannada, Hindi, Kanglish and Hinglish — on screen and out loud, with the source named
- Walking-route QR codes that open live GPS directions on the phone
- Live website and Android app: map, notices, events, clubs, issue reports, community, Campus IQ
- Admin dashboard: map editor, content, QR codes, kiosk device keys, moderation
- Push notifications when a notice is published

NOT BUILT YET

- Stand-alone kiosk on Wi-Fi, no PC — one box at every gate
- Kannada and Hindi script on the kiosk screen
- An enclosure for the breadboard build
- iOS app
- Admissions insights for the college: what visitors asked, in which language

5 ways to ask: English, Kannada, Hindi, Kanglish, Hinglish

12 college documents in the knowledge base

1 live data source for kiosk, web, app and admin

0 answers allowed that are not in the records

10 HOW A COLLEGE ADOPTS IT

IMPACT & USEFULNESS · 20%

WEEK 1

Map the campus: paths, buildings, rooms

WEEK 2

Load fees, placements, hostel, transport, events

WEEK 3

Install kiosks, print QR codes for every door

ADMISSION DAY

Visitors ask, scan and walk

BUSINESS MODEL (PROPOSED)

Software subscription: ₹50,000 – ₹1,50,000 a year per campus, by size

Kiosk hardware kit: one-time; sold or rented for the admission season

Setup service: we map the campus and load the content

Admissions insights: premium add-on

WHERE WE GROW

Anywhere people get lost and ask the same questions: hospitals, government offices, malls, exhibitions and events.
